- Accomplished Data Engineer with over 13+ years of experience in ETL processes and cloud data integration. Expert in using Azure Data Factory and Databricks to establish seamless cloud connectivity across systems such as ADLS, ADF, Synapse, and Databricks, improving data flow efficiency by 40%. Proven ability to enhance operational performance through data integration and workflow orchestration with tools like Autosys, resulting in a 30% increase in process efficiency.
- Skilled in leveraging Tableau BI to create insightful visualizations, driving informed decision-making and stakeholder engagement. Developed a Python-based API that streamlined data conversion to Parquet/CSV formats for Tableau HyperFile sourcing, cutting data integration time by 50%. Proficient in building dynamic dashboards and SQL databases, generating comprehensive reports and analyses using Big Data technologies including Spark, PySpark, Hadoop, HDFS, and Hive.
- Experienced in optimizing the software development lifecycle through CI/CD and automation tools such as Jenkins and RLM DevOps, reducing deployment time by 50% and fostering efficient code management and collaborative development.

Technical Skills

- Programming Languages: Python, SQL, Shell Scripting
- Cloud Platforms: Cloudera (CDP/CDH), Azure, AWS, GCP and Databricks
- ETL Frameworks: Azure Data Factory, Databricks, SSIS, Informatica
- Data Integration & Workflow Tools: Azure Data Factory, Oozie, Autosys, Airflow, Automagic
- Data Visualization: Tableau BI
- Big Data Technologies: Spark, PySpark, Hadoop, HDFS, Hive, Pig, Sqoop, Kafka
- CI/CD & Automation: Jenkins, RLM DevOps
- Version Control: GitHub, Bitbucket, GIT
- Collaboration Tools: JIRA, Confluence

Work Experience

Senior Data Engineer–Iris Software Inc.

01/2017 - 01/2026

Client – CitiBank, Walmart, Home Depot

- **Data Requirements & Integrity:** Collected and analyzed business requirements to ensure data integrity. Validated data completeness, accuracy, and consistency using Python libraries such as Pandas, NumPy, and Matplotlib. Enhanced data preprocessing and cleaning processes for effective feature engineering.
- **Quality Assurance & Data Profiling:** Conducted comprehensive data quality checks and profiling. Addressed data quality issues and provided actionable insights on data collection, mapping, aggregation, and balancing, which led to a 30% improvement in data accuracy.
- **Data Governance & Security:** Identified critical data areas and filtered datasets for relevance. Implemented data governance frameworks to comply with security policies, ensuring robust data management and protection.
- **Cloud Architecture & Solutions:** Designed and deployed scalable data solutions on the Cloudera platform (CDP/CDH) and Azure Databricks, enhancing data accessibility and performance. Achieved a 40% increase in data processing efficiency through effective cloud architecture.
- **ETL Process Engineering:** Engineered and optimized ETL processes using Azure Data Factory, Cloudera, and Google Cloud Platform. Established seamless cloud connectivity between systems such as ADLS, ADF, and Databricks, streamlining data integration.
- **Workflow Optimization:** Boosted operational efficiency by integrating and orchestrating workflows with tools like Airflow, Autosys, and Azure Data Factory. Improved processing time by 30% through effective workflow management.

- **API Development & Integration:** Developed a Python-based API for converting files to Parquet/CSV formats for Tableau HyperFile sourcing, significantly streamlining data integration and reducing processing time by 50%.
- **Data Quality Scripting:** Created and maintained data quality scripts using SQL and Hive to validate incremental data loads, ensuring high data integrity and consistency.
- **Visualization & Reporting:** Designed and delivered insightful visualizations using Tableau BI, facilitating data exploration and informed decision-making. Built and maintained dashboards and SQL databases to produce comprehensive weekly, monthly, and quarterly reports.
- **CI/CD & Automation:** Implemented a fully automated CI system with Jenkins, Oracle, and custom Python/Bash tools, enhancing deployment efficiency and reducing deployment time by 50%.
- **Big Data Technologies:** Specialized in Big Data technologies including Spark, PySpark, Hadoop, HDFS, and Hive, ensuring efficient processing and analysis of large datasets.
- **Development Lifecycle & Agile Scrum:** Streamlined the software development lifecycle using CI/CD and automation tools such as Jenkins and RLM DevOps. Managed projects using Agile Scrum methodologies, promoting efficient code management and collaborative development.
- **Version Control & Collaboration:** Utilized Bitbucket and GitHub for version control, and enhanced team collaboration and project management through Agile Scrum Boards and tools like JIRA.
- **Cross-Functional Collaboration:** Collaborated with cross-functional teams and stakeholders to understand data needs and deliver high-quality solutions, improving project outcomes and client satisfaction.

Key Achievements

- **Optimized Data Processing:** Architected and deployed a scalable data solution on the Cloudera platform (CDP/CDH) and Azure Databricks, increasing data processing speed by 40% and enhancing overall system performance.
- **Enhanced Data Integration:** Engineered and implemented ETL processes using Azure Data Factory, Cloudera, and Google Cloud Platform, establishing seamless cloud connectivity between ADLS, ADF, and Databricks. This integration streamlined data workflows and improved data flow efficiency.
- **Streamlined Data Conversion:** Developed a Python-based API for converting files to Parquet/CSV formats for Tableau HyperFile sourcing, reducing data integration time by 50% and accelerating report generation.
- **Improved Data Accuracy:** Created and maintained data quality scripts using SQL and Hive, which validated incremental data loads and improved data accuracy by 30%, leading to more reliable data-driven decisions.
- **Boosted Operational Efficiency:** Integrated and orchestrated workflows with tools like Airflow, Autosys, and Azure Data Factory, enhancing operational efficiency and reducing processing time by 30%.
- **Automated CI/CD Pipeline:** Established a fully automated CI system using Jenkins, Oracle, and custom Python/Bash tools. This automation improved deployment efficiency and cut deployment time by 50%, accelerating the software release cycle.
- **Enhanced Data Visualization:** Designed and implemented comprehensive dashboards and visualizations with Tableau BI, enabling better data exploration and decision-making. These insights led to increased stakeholder engagement and more informed business decisions.
- **Agile Project Management:** Utilized Agile Scrum methodologies and Scrum Boards to manage projects efficiently, enhancing team collaboration and accelerating project delivery.

ETL Data Engineer–Tata Consultancy Services

08/2012 – 12/2016

Client–Ceridian, Motorola Mobility

- Enhanced efficiency in handling various data tasks using Python for data manipulation and scripting.
- Employed **Microsoft SSIS** for seamless extraction, transformation, and loading of data across different platforms.
- Executed **Erwin Data Modeling** to design and maintain comprehensive data models, facilitating effective database management.
- **Performed DDL and DML** operations using **T-SQL**, including creating triggers, views, and stored procedures for streamlined data processing.
- Managed database roles, ensuring secure and organized access to data for different stakeholders.

- Conducted data inventories and implemented quality assurance measures, contributing to high accuracy and reliability in datasets.
- Played a key role in testing forms and troubleshooting data-related issues, ensuring data integrity and system functionality.
- **Monitored database performance**, utilized **Tableau** for visualization and reporting, and implemented optimizations for enhanced efficiency.
- Facilitated communication by providing clear insights into data trends, patterns, and analysis results.
- Applied expertise in data reformatting and contributed to designing and implementing snowflake schema dimensions for improved data organization.
- Documented processes and outcomes using **Confluence**, ensuring comprehensive and accessible information for future reference.
- Supervised business activities during quarter, month, and year-end periods to ensure seamless operations.
- Compiled and presented weekly and monthly application metrics reports to clients.
- **Investigated** issues, analyzed logs, and replicated problems to identify and implement solutions.
- Developed and executed test cases for **User Acceptance Testing (UAT)**.
- Facilitated the transfer of application knowledge and quality practices within the team.
- Delegated tasks to team members based on issue priority.
- Documented and tracked production issues, providing solutions in a 16x7 support environment.
- Managed and resolved Severity 1, Severity 2, and Severity 3 tickets in line with Service Level Agreements (SLAs).
- Coordinated releases and planned maintenance activities for the Schedule Sharing application and its integrated systems.
- Escalated critical issues to Motorola management and informed business users during high-impact situations.
- Developed data quality scripts using SQL and Hive to validate data loads and ensure data integrity.
- Created various data visualizations using Python and Tableau.
- Analyzed and provided solutions to business problems using data analysis, data mining, and optimization tools.
- Participated in business meetings to understand and gather business requirements.

Key Achievements

- Developed ETL processes using SSIS, ensuring efficient data extraction, transformation, and loading.
- Optimized data queries and processing using Hive, enhancing data retrieval speed and performance.
- Created data quality scripts with SQL, improving data accuracy and reducing errors.
- Designed and implemented data pipelines using Hive, ensuring seamless data flow and integration.
- Assisted in building and maintaining data warehouses with SSIS, contributing to improved data management and accessibility.
